Raptor SR for Autel Evo II v2 [A132S]

nett price	139.00 \$
Availability	Always on stock
Product code	A132S
EAN	853854008575

Product description

Features:

- No modification to the drone itself
- Long range extension without external boosters
- Design does not contain any removable parts
- Complete solution
- Controller NOT included

Autel Evo II v2 is perfect for holiday trips. Its long range allows its user to reach places that were earlier completely inaccessible, such as deep forests, canyons, lakes etc. Evo fits in well in every situation. The built-in camera allows recording videos in 4k.

4Hawks antenna for Autel Evo II v2 model is highly advanced, operating in dual-band (2.4 + 5.8 GHz) frequencies. The concept behind the look of the antenna was to make it look like it was a part of the drone by default. Entire construction is 100% UV protected to assure longevity of the equipment. Additionally, part of the construction is made of aluminum to make the whole construction as light as possible. Mounting is made of stainless steel for rock solid stability. Mounting the range extender leads to permanent changes with the remote controller. The entire set is lightweight and uniform (without any loose equipment pieces).

Changing the direction of the antenna shouldn't cause any difficulties, as the system was designed in a way that allows quick position change with just a single "click". This way you can be sure that you do not lose the connection with your drone.
